

## **Scaleo chip becomes an AUTOSAR Associate Member**

### **The SOC specialist will take part in the second phase of the AUTOSAR industrialisation process**

**Sophia Antipolis, May 29th 2007,** Scaleo chip announces it has become an Associate Member of the Automotive Open Systems Architecture (AUTOSAR) partnership.

Scaleo chip thus joins automobile manufacturers and suppliers, software vendors, tool manufacturers and semiconductor companies whose common goal is to establish an open standard for an automotive architecture enabling the management of existing and emerging embedded functions.

Gilles Marsigné, Scaleo chip VP Sales and Marketing, declares *"Scaleo chip, as an Automotive Semiconductor Supplier, needs to provide standard IC compatible with future automotive standard. First of all, we are a production supplier for actual body controller applications, we have an advanced engineering development with Autosar compatibility requested by an important car manufacturer, for mass production starting 2010. Also, we are part of a French cluster project developing a new body controller architecture which must be AUTOSAR compliance, with an integrated circuit using ARM based core"*.

He adds *"The automotive product strategy developed by Scaleo chip must be AUTOSAR compliance"*.

The recent AUTOSAR release 2.1 presents the results from the first phase of the standardisation process. It brings up updated specifications for automotive applications in more than 120 documents which introduce the first descriptions for application interfaces such as interior electronics. It provides a basis for further functional innovation and ensures very high quality standards in automotive development.

The second step of the standardisation process, for which Scaleo chip joins the AUTOSAR partnership, will last until 2009 and will refine and strengthen these specifications.

Gilles Marsigné, Scaleo chip VP Sales and Marketing, explains: *"This new AUTOSAR Associate Member agreement demonstrates Scaleo chip's position as a key SOC specialist. We are looking forward to contributing to the definition of an open automotive standard and will provide high level support in the partnership."*

### ***About Scaleo chip***

Scaleo chip is based in Sophia Antipolis, France. The company is specialized in ARM-based SoCs design and developed a unique expertise in the field of multicore architectures. Scaleo chip's technology can be found at the heart of advanced digital products such as portable video systems, digital TV terminals, video games, imaging systems, wireless communications and telematics.
