

*"The new easyCAN family has been developed to meet the specific automotive requirements. Products are AECQ100 qualified in the -40°C + 105 °C temperature range,"* declared Daniel Aufaure, Scaleo chip President & CEO. *"These are very comprehensive low-cost products which meet the high level automotive expectations (robustness, quality) and profit by the Scaleo chip support and reactivity. Thanks to the most suitable FLASH technology for the automotive environment combining reliable process with innovative and competitive solution, we are able to provide innovative automotive solution with performances, reliability and price,"* he added.

Three chips are currently available now for mass production in 80, 100 and 144 pins LQFP package. To request an Evaluation Kit with complete application notes and software suites, please contact [easyCAN@scaleochip.com](mailto:easyCAN@scaleochip.com).

For any further information about the new easyCAN automotive MCUs family, please contact Scaleo chip at [contact@scaleochip.com](mailto:contact@scaleochip.com).

### ***About Scaleo chip***

Scaleo chip is based in Sophia Antipolis, France. The company is specialized in ARM-based SoCs design and developed a unique expertise in the field of multicore architectures. Scaleo chip's technology can be found at the heart of advanced digital products such as portable video systems, digital TV terminals, video games, imaging systems, wireless communications and telematics.
